

Project milestone 3:

- **What features were completed?**

- A functional game screen and controllable game piece.
- An outline of the database we will use to store user info and game information
- HTML front end page for sign in/login.
- About the Team webpage.
- Registration webpage
- Homepage webpage
- Levels webpage

- **What worked during the demo?**

- The game piece was drawn, but not responsive to controls.
- The database tables were created but were not filled in with any information yet
- HTML pages for sign in/login, homepage, about the team, registration, and the layout for the levels webpage

- **What issues were faced either during the development or during the demo?**

- We aren't sure yet how to connect the back-end SQL code that we completed to the HTML and JS files
- We had trouble connecting javascript modules to HTML

- **What were the suggestions offered by the TA?**

"Work harder"

- **Individual contributions by each team member**

Chandler: I completed the Html for the login page of our website, and made the layout on how the first page of our website should look including registration,

sign in, forgot password, remember me, and play as a guest. As well as assisting other group members with project planning.

Jack: I completed the register page and assisted my group mates with project planning and have begun working on connecting the register page to the rest of the site.

Jaylee: Veda and I worked together to begin working on the back-end, specifically with SQL. We created tables to store the registration data as well as a place to store all of the levels for the game. We also referenced older projects we had to provide us with a template we could use for this project.

Sam: I made the game screen and player, which are now responsive to keyboard controls.

Veda: I worked on the sql part with Jaylee by creating tables and columns that will store the data. We are looking at our other homeworks and work that used sql as a starter. We created a login, registration, and levels table.

Suyogya: I worked on creating the base of the website, made About the Team page, although not yet completed with a description of everyone on the team, it is close. Linked the login page to the website.
